

1. What has the instructor done especially well in the teaching of the course?

hands on activities, indepth explanations of what we are trying to do.  
making the topics fun and relatable the labs were interesting and enjoyable.

I really enjoyed this class. I learned alot and had alot of fun while doing it.  
I reccomended it to all my friends. I really really enjoyed this class &

2. Suggestions for improving the course?

make sure that they really are interdisciplinaty, interactive courses.

↑  
10/11/60  
←  
make them interesting

if you are going to assign a style of presentation  
please make sure you teach in that style  
(thinking of midterm)

1. What has the instructor done especially well in the teaching of the course?

Great course. Really appreciated learning something I'd never learned before + getting to apply it to so many diverse topics. Class discussions were very insightful, even (or especially) when they weren't on topic.

In terms of interdisciplinarity:

lots of it. Sometimes wish there was more time to tie it back to 'concrete' code, while we're talking about biology or mold or politics.

2. Suggestions for improving the course?

In terms of depth: would have loved it as a depth but I wouldn't have been able to bring in my background from my major. Good chance to let them learn something new + ~~hard~~ hands-on. Allows them <sup>the chance to</sup> apply any potential major interests to something new + see how dedicated they are to it.

1. What has the instructor done especially well in the teaching of the course?

Very Good at giving feedback and helpful advice on projects. Class Discussion was always very interesting. I also that the labs were a lot of fun, although very long! But I always felt I learned a lot more about programming in labs than in lecture.

2. Suggestions for improving the course?

Class was fun, but lectures sometimes felt like they were spread to fill the time limit which wasn't good.

1. What has the instructor done especially well in the teaching of the course?

2. Suggestions for improving the course?

I feel that the college 60 seminars aren't defining any kind of "Sophomore" experience for me (whatever that should be).

I don't think they should be required. I see no difference between the setup of this class to any other, since most of my classes at Mills are of ~~eq~~ about equal size.

**1. What has the instructor done especially well in the teaching of the course?**

Overall style of teaching is great, use of examples and hands-on work was extremely helpful.

**2. Suggestions for improving the course?**

Three days per week of class was a little too much, sometimes it felt like things got too repetitive. I would suggest having more hands-on work during the lecture, and reducing or getting rid of the lab time.

1. What has the instructor done especially well in the teaching of the course?

Good explanation of material,  
the additional help was great  
and also the fact that we were  
able to practice & learn about  
presentation/communication skills  
was very helpful.
